# SAFETY INSTRUCTIONS

---

## SAFETY CHECK AFTER SERVICING

Confirm the specified insulation resistance between power cord plug prongs and externally exposed parts of the set is greater than 10 Mohms, but for equipment with external antenna terminals (tuner, receiver, etc.) and is intended for **C** or **A**, specified insulation resistance should be more than 2.2 Mohms (ground terminals, microphone jacks, headphone jacks, line-in-out jacks etc.)

## PRECAUTIONS DURING SERVICING

1. Parts identified by the **Δ** symbol parts are critical for safety.  
Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.  
Examples: RF converters, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
  - 1) Wires covered with PVC tubing
  - 2) Double insulated wires
  - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
  - 1) Insulation Tape
  - 2) PVC tubing
  - 3) Spacers (Insulating Barriers)
  - 4) Insulation sheets for transistors
  - 5) Plastic screws for fixing microswitch (especially in turntable)
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap ends of wires securely about the terminals before soldering.

6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

## VOLTAGE CONVERSION

If the voltage of your machine is switchable to either 110 to 120V or 220 to 240V, please proceed as follows.

1. Disconnect the power cord.
2. Turn the voltage selector located on the rear of your machine with a screwdriver until the correct voltage is indicated.

## CYCLE CONVERSION

Cycle Conversion is not necessary Since PJ-33FS Uses DC motor.

Fig. 5-2

Fig. 5-4

1. Build a Dial Cord as shown Fig. 5-1.
2. Take off a screw A, then Remove the Drum from the Variable Capacitor.
3. Set the Drum as shown Fig. 5-3, and make sure that the Variable Capacitor is fully clockwise.
4. Set the Dial Cord as shown Fig. 5-2.
5. Set Back the Drum to the Variable Capacitor with a screw A.
6. Turn the TUNING DIAL to low end, then set the Dial pointer as shown Fig. 5-4.

**NOTE:** Set the internal modulation signal generator to 22.5 kHz deviation, 400 Hz.

## VII. MECHANICAL ADJUSTMENTS

### 7-1 TAPE SPEED ADJUSTMENT (Refer to Fig. 7-1)

Fig. 7-1

Connect a frequency counter to line output terminals. Playback a 1,000 Hz Tape Speed Test tape (AT-750774)

and adjust a tape speed adjustment volume (see Fig. 7-1) to obtain a tape speed of 990 Hz to 1,000 Hz.

### 7-2 REC/PB HEAD AZIMUTH ALIGNMENT (Refer to Fig. 7-2)

Fig. 7-2 Top View of the Heads

Playback a 10 kHz Azimuth Alignment tape (AT-750778) and adjust the screw (A) until the output levels of both channels are maximum. After adjustment, point lock the screw (A).

**NOTES:** 1. Be sure to clean the heads prior to head adjustment.

2. Be careful not to use a magnetized driver or other magnetized tools in the vicinity of the heads.
3. Be sure to demagnetize the heads with a Head Demagnetizer before and after head adjustment.

## VIII. AMPLIFIER ADJUSTMENT

### 8-1 AMPLIFIER ADJUSTMENT POINT

Resistor and Capacitor which is not listed in this parts list, please refer to COMMON LIST FOR SERVICE PARTS.

## ATTENTION

1. When placing an order for parts, be sure to list the parts no., model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Parts List may be partially changed, please use this parts list for all future reference.

## HOW TO USE THIS PARTS LIST

1. This Parts List shows the parts that are considered necessary for repairs. Other parts, such as resistors and capacitors, are shown in the "Common List for Service Parts". Select and order such parts from the "Common List for Service Parts".
2. The Recommended Spare Parts shows those parts in the Parts List which are considered particularly important for service.
3. Parts not shown in the Parts List and "Common List for Service Parts" will not be supplied in principle.
4. How to read list

5. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List. It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index.
